

SIMPLE SMART PORT DYNAMIC GUIDANCE

AMPRON 
LED WAYFINDING SOLUTIONS

**NORDIC
MODERN
DURABLE**

Solution is intended to provide simple start to arrange traffic with dynamic wayfinding signs. It consists of LED variable message boards and content management software.

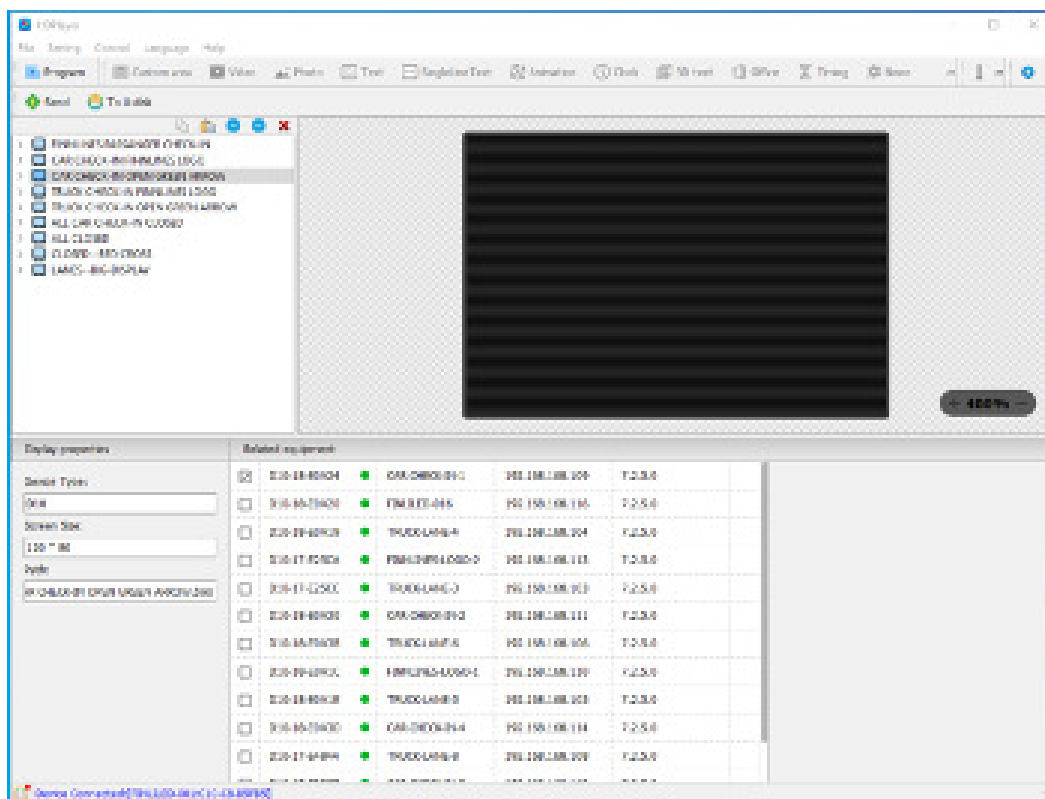

USE CASE

Meant for small ports and other ports who want to get things started first without a lot of automation and take their path slower. Taking small steps with small improvements allows to move ahead with smaller investments and workload.

CONTENT MANAGEMENT

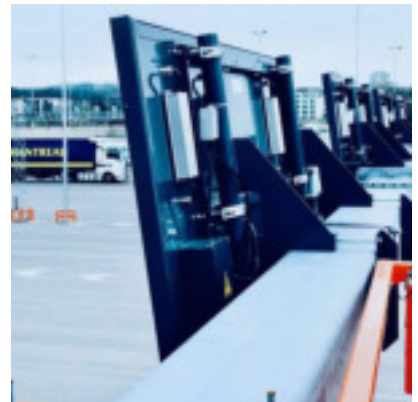

Content is managed through Windows PC based software. It has options for creating layers, playlists and scheduling content.

It plays video, pictures, moving graphics and audio. In addition you can show time. Playlists may be activated manually or scheduled. Displays can be grouped or information can be sent individually.

DISPLAY HARDWARE

We advise to use our Rugged DR models. They are designed specifically for harsh port weather conditions. They can withstand harsh winds, salty water, cold and heat.

PROJECT STAGES

Milestones and deliverables

S1

FINAL DESIGN DOCUMENT

Ampron will prepare the customer specific technical design document in cooperation with the Customer to the level sufficient for manufacturing

S2

PRODUCTION

Ampron will manufacture the solution

S3

FACTORY ACCEPTANCE

Ampron will perform Factory Acceptance Tests at its premises prior to packaging and shipment

S4

INSTALLATION

Customer will install the products

S5

CELEBRATION

Ampron and Customer will celebrate the success
